WAKOL D 3318 MultiFlex, fibre-containing – the universal adhesive against impressions

One product for all elastic flooring

Universal application for rubber, PVC design, PVC, CV floor coverings, PVC-free floor coverings and linoleum. The wide range of applications simplifies inventory and storage and reduces the risk of confusion. WAKOL D 3318 MultiFlex, fibre-containing is very low-emission and labelled with the EMICODE EC1 PLUS as well as Blue Angel DE UZ 113.

Safety through fibre technology

Special fibres in the adhesive guarantee an even application of the adhesive also with a standard trowel. A special trowel notch size is not required. The results are low consumption and defined airing times over the entire area.

At the same time, the special fibres reduce indentations in the adhesive bed from walking and kneeling on the freshly laid flooring during laying as well as deformations in the hardened adhesive bed caused by heavy point loads during use. The result is safety for permanently beautiful surfaces.

Long working time

WAKOL D 3318 MultiFlex, fibre-containing is a wet bed adhesive with long working time.

The laying reliability is increased thanks to the good wetting of floor covering across the entire working time.

WAKOL D 3318 MultiFlex, fibre-containing builds up extremely high strengths after complete setting so that all floor coverings are reliably held in place.

Comfortable and economic usage

WAKOL D 3318 MultiFlex, fibre-containing stands for comfortable usage. The adhesive is applied using the normal trowel notch sizes and is very easy to spread with low consumption. The high suction adhesion of WAKOL D 3318 MultiFlex, fibre-containing prevents undesirable slipping of the flooring, especially important in design flooring.

WAKOL D 3318 MultiFlex, fibre-containing offers great economy through low consumption and comfortable, time-saving usage.
