WAKOL MS 262 Wood Flooring Adhesive, firm-flexible – ergonomic application for a smooth surface

Specifically Developed for Adhesive Applicators

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible has been developed for use with most standard applicators. WAKOL MS 262 Wood Flooring Adhesive, firm-flexible is designed to allow easy squeeze out, and unwanted dripping has been eliminated. When you use WAKOL MS 262 Wood Flooring Adhesive, firm-flexible you can be sure that you will achieve the best possible outcome.

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible is available in 20.0 US.fl.oz and 1.0 gal foil tubes, which means it can be used in all standard applicators.

Firm-elastic MS polymer adhesive for reliability and stability when laying wood flooring

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible is a firm-elastic MS polymer adhesive that combines elasticity with strength. Its high inner strength enables it to more comfortably absorb any movement caused by expansion of the wood flooring. Wood flooring laid with firm-elastic adhesive is more stable than flooring laid using standard elastic adhesive.

Can be used universally for virtually any type of wood flooring

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible is suitable for laying mosaic parquet, on edge lamella parquet, strip parquet, multi-layer parquet, solid wood planks as well as cork flooring with an HDF/MDF middle layer and cork stabilizing layer on absorbent and non-absorbent subfloors indoors.

Although generally applied with an applicator, WAKOL MS 262 Wood Flooring Adhesive, firm-flexible can also be applied with a trowel blade.

Suitable nozzles and trowel blades are available from Wakol.

Zero VOC & No interaction with finish

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible has no VOC content or any plasticising substances. Ruling out the migration of adhesive components that interact with wood finishes.

Connected Systems – the perfect match

WAKOL MS 262 Wood Flooring Adhesive, firm-flexible is one of the products covered by the Loba and Wakol “Connected System” guarantee. This means that WAKOL MS 262 Wood Flooring Adhesive, firm-flexible and recommended Loba coatings are compatible. No more worries about unwanted interactions between the products – we guarantee it!

Less waste

When used in an applicator, foil tubes make it easy to ensure that you utilize every last drop. This eliminates the tiresome, time-consuming task of scraping traces of adhesive from the bottom of your pail. When crushed, the foil tubes occupy significantly less landfill space than bulky stacks of adhesive containers.

The closed system foil tubes protect remaining adhesive from moisture in the air in the building when you are working. Even when the packaging is opened, the surface of the product does not start to dry out or form a skin. This ensures that the adhesive you apply will always be fresh.

Always refer to the Technical Data Sheets before use.
